CAS SCIFINDER®

GIVING SMALL BUSINESS EXECUTIVES CONFIDENCE

User success story

The Challenge

This organization generates information and ideas about agents and approaches for chemotherapy and immunoprevention. The executive used CAS SciFinder to help determine novelty and freedom to operate while finding research precedents.

CAS

A division of the
American Chemical Society

This CAS SciFinder Discovery Platform success story was provided by an R&D executive/director with a small pharmaceutical research company who used the solution to source answers to help set research direction from the outset.

The Solution

The executive used CAS SciFinder in several ways to enhance their organization's research efficiency. This included:

- Assessing the IP landscape
- Identifying substances and reactions
- Finding commercially available chemicals
- Performing literature reviews to generate a hypothesis
- Sharing information with colleagues
- Staying up to date on research in their field

Because CAS SciFinder is easy to use and provides precise, comprehensive results, the executive used it as their primary source for unequivocally identifying agents. Even if issues were discovered, the research gave the organization a robust starting point for working with CAS staff.

The Outcome

Among a multitude of examples, the executive identified the use of CAS SciFinder to help identify a synonym and another CAS Registry Number® for a specific agent. As a result, they found many sources that provided answers to basic questions, which increased confidence in the research direction from the outset.
